The Rheumatology and Physical Medicine Department provides the state of the art technology DRX9000 for non-surgical treatment of slipped disc.

Spinal Decompression is a treatment used for the management of pain and disability for patients suffering with incapacitating low back pain and sciatica caused by slipped disc (lumbar and cervical).

The DRX9000 True Non-Surgical Spinal Decompression System™ is designed to provide pain relief for slipped disc and degenerative injuries of the spine. Through the application of spinal decompressive forces to these injuries, the DRX9000™ has given patients relief from back pain and has allowed them to resume the activities they enjoy.
